

The Business Problem

- **Lack of Professional Infrastructure:** There is currently no dedicated, easy-to-use service platform for booking solar panel maintenance and cleaning.
- **Efficiency Loss:** Dirty solar panels can lose up to 25% of their energy output, but homeowners lack a streamlined way to address this.
- **Safety & Difficulty:** DIY cleaning involves climbing roofs and handling electrical equipment, creating a significant barrier for the average user.
- **Disconnected Market:** No centralized system exists to track solar health or connect service providers with system owners.

Solution: Requirement Overview

1. User Management

- Secure Registration (Email/Password)
- Detailed Profile: Address & Contact info
- **Asset Log:** Input solar system specs and physical location on property

2. Service Booking

- On-demand service request portal
- History of past maintenance

3. Operational Core

- **Unified Database:** Centralized storage for all user, asset, and request data.
- Full access for Administrators and Operations teams.

4. Operator Dashboard

- Visual tracking of total registrations
- Geographic view of solar installations
- Real-time monitoring of service requests
